ARJUN VERMA

Senior Java Full Stack Developer | AI-Agentic Development
+91-9000000001 | arjun.verma@example.com | LinkedIn

PROFESSIONAL SUMMARY

Full Stack Java Developer with 7+ years of experience across product and service-based firms, specializing in Investment Banking & Global Capital Markets (IBD/GCM), Architectural Hardware Distribution, and Data Transfer & Conversion domains. Adept at building scalable, high-performance applications across the full stack, with a strong grasp of cloud platforms, modern development frameworks, and agile delivery practices. Increasingly focused on AI-agentic development — building LLM-powered tools and agents that automate real engineering workflows — alongside proven ability to lead teams, drive technical excellence, and deliver solutions aligned with complex business needs.

TECHNICAL SKILLS

Backend: Java (8 & 17), Java Collections, Spring Framework (Core, Boot, MVC), Hibernate (JPA), RESTful API Development, Microservices Architecture, Unit Testing (JUnit, Mockito), Functional Testing, BDD (Cucumber with Gherkin), Elastic Stack (Elasticsearch, Kibana), Build Tools (Ant, Maven, Gradle)

AI & Agentic Development: GitHub Copilot, Claude Code, Cursor (AI-augmented development workflows); LLM API Integration (function-calling, tool-use); Prompt Engineering; Agentic Workflow Design; Retrieval-Augmented Generation (RAG) concepts

System Design & Problem Solving: Data Structures & Algorithms (DSA), High-Level Design (HLD), Low-Level Design (LLD), Scalable System Design

Database: MySQL, MongoDB, BigQuery, Oracle, SQL Server, CData, Liquibase

Cloud & Monitoring: Google Cloud Platform (GCP), Amazon Web Services (AWS), Datadog, Splunk

Frontend: GWT, SmartGWT, Angular 11, JavaScript, HTML5, CSS3

DevOps & Tools: Docker, Git, Jenkins, Bitbucket, Swagger, Autosys, Gradle, Maven, Ant, Batchmon, OneUI, Gerrit

Reporting & Data Engineering: Jasper, Cloud Data Fusion (CDF), Data Transfer Service (DTS)

Extra: Software Development Methodologies (Scrum, Agile, Kanban), R Programming, Unity3D, Unreal Engine, Blender, Sandbox

PROFESSIONAL EXPERIENCE

Senior Developer **October 2024 - Current**

Northwind (Client: Contoso) Noida, India

- Working with a modern tech stack that includes Java 17, Docker, Google Cloud Platform (GCP), BigQuery, Cloud Data Fusion (CDF), and Data Transfer Service (DTS), along with multiple databases such as CData, MySQL, SQL Server, MongoDB, and Oracle, to build scalable, cloud-native data integration solutions.
- Designed and developed custom plugins for Google Cloud Data Transfer Service (DTS), including data connectors for Stripe and MySQL, enabling efficient and secure data ingestion.
- Contributed to Google Cloud Data Fusion (CDF) by building new plugins such as Wrangler, FTP, and HTTP, and by enhancing error management capabilities across multiple connectors.
- Integrated OAuth 2.0 authentication for the HTTP plugin to support source, sink, and streaming pipelines, ensuring secure and compliant data transfers.
- Led a team in the end-to-end development of a new plugin from scratch — defining architecture, managing sprints, conducting code reviews, and ensuring timely delivery.
- Authored comprehensive JUnit test cases to improve code quality and maintain high test coverage across plugin modules.
- Delivered key feature milestones on or ahead of schedule while aligning with evolving product requirements and stakeholder expectations.
- Collaborated with cross-functional teams and actively contributed to design discussions to enhance the scalability, maintainability, and seamless delivery of cloud-native data integration solutions.

Key Project: AI-Powered PR/CL Code Review Agent

  - Designed and built an AI-powered code review agent (Java/Spring Boot backend integrated with an LLM API) that automatically analyzes pull/change-list diffs and generates structured review feedback — covering style issues, potential bugs, and missing test coverage.

- Adopted team-wide as part of the standard PR workflow, reducing code review turnaround time by 60-70%.
- Demonstrates practical agentic tool-use: automated diff retrieval, LLM-based reasoning over code, and structured feedback generation integrated directly into the existing review process.

Associate Technical Lead **September 2021 - October 2024**

Fabrikam (Client: Tailspin Hardware Inc) Gurgaon, India

- Worked in the Architectural Hardware Distribution domain, contributing to the development of enterprise-grade solutions for managing hardware ordering, reporting, and project tracking.
- Leveraged a robust tech stack — including Java, Spring, Spring Boot, Hibernate, MySQL, GWT, SmartGWT, AWS, and Datadog — to develop and maintain scalable, full-stack web applications.
- Developed and delivered 10+ new features and enhancements to the core product, improving user experience and operational efficiency.
- Designed and implemented critical software components for a new module, contributing to the foundational architecture of the application.
- Engineered a comprehensive ordering system integrated with detailed hardware and material reporting, streamlining inventory and procurement workflows.
- Improved the accuracy of key reporting systems by 4% through enhanced data integration and processing logic.
- Consistently met regulatory milestones and achieved 100% on-time delivery across all project phases, ensuring alignment with client expectations and timelines.
- Mentored junior developers, leading to a 30% increase in team productivity through knowledge sharing and improved code quality practices.

Senior Software Engineer **December 2019 - September 2021**

Litware (Client: Woodgrove Investment Bank Ltd) Pune, India

- Worked in the Investment Banking and Global Capital Markets (IBD/GCM) domain, specifically on Capital Markets, Equity Syndication, IPOs, Block Trades, Deal Creation, Orders, and Trade Management for institutional investment platforms.
- Leveraged a comprehensive tech stack — including Java, Spring, Spring Boot, Hibernate, REST APIs, MySQL, MongoDB, Liquibase, Autosys, Elastic Stack, Kibana, OneUI, Batchmon, Ant, Maven, Gradle, and Web Farm environments — to develop and maintain complex enterprise-grade applications.
- Designed and implemented new services for deal generation and order placement, streamlining workflows across multiple business units.
- Refactored a legacy deal-making application to support cross-platform use (iPad and Windows), improving stability and user experience for deal, trade, and order management operations.
- Developed reusable software components adopted across multiple projects, reducing development effort by 50% and standardizing code practices.
- Re-engineered performance-critical modules within a single sprint to rely on a centralized utility library, achieving a 68% performance improvement.
- Consistently achieved 100% on-time project delivery, aligning development with regulatory compliance and market timelines.
- Deployed applications in web farm environments (server farm) to ensure high availability and load-balanced performance across distributed systems.

Software Engineer **March 2019 - November 2019**

Q7Logic Technology Noida, India

- Contributed to the development of an AI and IoT-based room security product, focused on intelligent access control and real-time monitoring.
- Collaborated with a team of 5 senior developers to analyze requirements, design system architecture, and implement new features and enhancements.
- Increased test coverage of the main product from 5% to 25%, and up to 80% for supporting modules, while actively contributing to new feature development.
- Delivered all project milestones 100% on time, ensuring compliance with regulatory and security standards.
- Participated in regular sprint planning, code reviews, and debugging sessions to support continuous delivery and team collaboration.

- Gained hands-on exposure to cross-functional coordination, working with QA and DevOps teams for smooth deployment and release cycles.

CERTIFICATIONS

- Oracle Certified Professional: Java SE 8 Programmer
- Oracle Certified Associate: Java SE 8 Programmer

KEY ACHIEVEMENT

Best Annual Performance

Consistently awarded the highest annual performance rating throughout my tenure, placing me among the top ~5% of employees.

LEADERSHIP & MENTORSHIP

- Mentored junior developers across multiple projects, offering guidance on code quality, design patterns, and best practices, leading to a 30% increase in team productivity.
- Led a small team in the complete development lifecycle of a custom plugin for Google Cloud Data Fusion, including architecture design, task delegation, sprint planning, and performance reviews.
- Conducted internal knowledge-sharing sessions on unit testing, cloud plugin development, and OAuth integration, fostering a culture of continuous learning and technical growth.
- Actively participated in peer code reviews and architectural discussions, helping elevate code standards and ensuring maintainable and scalable solutions across the team.

EDUCATION

Dr. A.B.C. Example Technical University August 2015 - June 2019
BTech - Computer Science and Engineering, 71.18%

Elm Public School April 2013 - March 2014
Higher Secondary Certificate, 68%

Elm Public School April 2011 - March 2012
Secondary School Certificate, CGPA: 7.8

PERSONAL PROJECTS

Prompt Smith – AI Prompt Refinement Engine

Built a full-stack tool (Node.js/Python backend + LLM API) that takes a vague user prompt (e.g. "build a UI page for a PUBG game") and expands it into a detailed, structured prompt — covering tech stack, typography, color system, and layout specifics — that users can paste directly into any AI coding agent (Claude, etc.) for significantly more accurate first-pass output and reduced token waste from re-prompting. Includes a direct code-generation mode and a Figma plugin integration for design-to-prompt workflows.

Airline Reservation System

Designed and developed a web-based airline reservation system using Java 8, Spring Boot, Angular 8, and MySQL, supporting flight bookings, cancellations, and real-time seat availability. Demonstrated full-stack proficiency and REST API integration in a microservices setup.

Banking Management System

Built a secure and modular banking system with features like account creation, fund transfer, and transaction history using Java 8, Spring Boot, Angular 8, and MySQL. Focused on implementing core banking logic with role-based access control and form validations.

Campus Planner – Classroom Scheduling System

Developed a smart scheduling solution using Java, MySQL, HTML, CSS, and JavaScript to optimize classroom and faculty allocations. Helped simulate real-time conflict resolution and timetable generation for educational institutions.

Grade Sense – Student Performance Predictor

Created a data-driven application to predict student performance based on academic and behavioral metrics. Used Python, R Programming, HTML, CSS, and JavaScript for data analysis, visualization, and front-end presentation. Integrated basic machine learning algorithms for outcome predictions.
